

Exoboard

Short description: Rigid PVC with a foam core made from recycled materials, cut to any size or shape

Long description: Create and sell everything from personalised football cards to custom-shaped signage with Exoboard, precision cut to any shape and printed in high definition for a clean, professional finish. Designed for total creative freedom, each board is produced from your artwork and cut along a custom vector path – ideal for producing retail displays, personalised designs and custom-cut formats.

Made from lightweight yet durable PVC with a foam core, Exoboard is easy to handle while remaining rigid and stable for display. Its smooth, high-quality surface is ideal for graphics, text and imagery, and offers excellent resistance to everyday wear. Fully waterproof, it's suitable for both indoor and outdoor use.

Designed with sustainability in mind, Exoboard contains over 50% recycled PVC and is fully recyclable. A lower-impact alternative to traditional PVC, it combines environmental responsibility with the strength and print quality required for professional display applications.

Your design is printed using advanced flatbed technology, delivering sharp detail, vibrant colour and consistent coverage across the entire surface. Each board is then contour cut to match your exact shape, ensuring smooth edges and a precise finish that aligns perfectly with your artwork. A small bleed is included around the cut line, preventing unwanted white edges and keeping your final product looking polished from every angle.

Available in any custom size or shape to match your file, Exoboard is built to adapt – whether you're creating signage, branded displays or personalised products.
